**Re: The University of Texas at Austin
LEED-NC 2009 Treatment of District Thermal Energy**

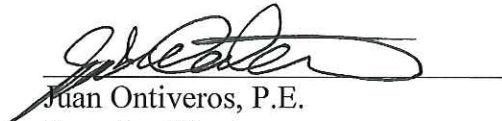

To Whom It May Concern:

The University of Texas at Austin Main Campus operates a district energy system delivering electricity and steam from a gas-fired combined heating and power facility and chilled water from chillers in central chilling stations. For compliance with the guidelines defined in the *Treatment of District or Campus Thermal Energy in LEED V2 and LEED 2009 – Design & Construction*, the University of Texas at Austin has prepared supporting documentation relating to the following credits:

- EAp2 & EAcl – Energy Performance
- EAcl3 – Enhanced Commissioning
- EAp3 & EAcl4 – Refrigerant Management
- EAcl5 – Measurement & Verification

These documents are maintained as needed for LEED building projects on campus, and are available for download at:
