Re: Title V Federal Operating Permit Renewal/Revision Application
Site Operating Permit (SOP) No.: 093

Dear APIRT:

The University of Texas at Austin is pleased to submit the enclosed application to renew and revise the Hal C. Weaver Power Plant Title V Site Operating Permit (SOP) No. 093. Included in this application are the following permit revision requests:

1. Add emergency generators EMERENG1 and EMERENG2 authorized by an unregistered PBR under 30 TAC §106.511.
2. A change of the opacity monitoring requirement using EPA Method 9 to visible emission checks using EPA Method 22. Currently, opacity observations are conducted for each unit according to Method 9 either on a quarterly or monthly basis depending on the applicable requirement in the Title V permit for the specific unit, which in some cases is inconsistent or more stringent than the applicable New Source Review (NSR) permit special condition. The primary fuel for all boilers and turbines within the power plant is purchased pipeline-quality natural gas. Boilers 1 and 2 (Unit ID 1), Boiler 3 (Unit ID 2), Boiler 7 (Unit ID 3) authorized by NSR Permit 48794 and Boiler 8/Turbine 8 (Unit ID 29) authorized by NSR Permit 9322 are authorized to fire fuel oil as backup fuel. However, only Boiler 3 and Boiler 7 are capable of firing fuel oil, which is currently not anticipated to be used for either unit and only would occur in an emergency when natural gas supply is curtailed or interrupted. Method 9 opacity observations for several years have determined zero opacity. The University of Texas at Austin requests to change the monitoring frequency to quarterly visible emission checks according to Method 22 (see Form OP-MON). If a visible emission check determines there are visible emissions, then the opacity would be determined within 24 hours of observing the visible emissions according to Method 9. This change will align all boilers and turbines with the periodic monitoring requirements currently applicable to Boilers 1 and 2.
3. Correct the construction date for Turbine 10 on Form OP-UA15, Table 1a to "After January 31, 1972" based on a construction date of November 10, 2008.
4. Add cooling towers CT-1 and CT-2 authorized by an unregistered permit by rule (PBR) under 30 TAC §106.371.
5. Revise list of applicable PBRs for emissions sources in Forms OP-REQ1 and OP-PBRSUP.
6. Document negative applicability of selected state and federal requirements for emission sources as indicated on Form OP-REQ2.

This renewal includes a significant revision to the SOP. In accordance with the requirements in 30 TAC, Chapter 122, this application includes the forms listed below:
